

Client Presentation

Rotana Spa Management System *Presented to the business owner / client*

1. The problem

Spa and gym operators face daily operational pain:

- **Manual service tracking** — treatments are recorded on paper and easily lost.
- **Lost treatment history** — no reliable record of what each customer received, when, and by whom.
- **No towel accountability** — towels are issued and never counted or returned.
- **Difficult therapist monitoring** — no visibility into who is treating whom, when, or how busy the team is.
- **Slow, duplicate data entry** — member details are re-typed at every visit.
- **No control over who can see or change what** — every staff member can see everything.

2. The solution

The **Rotana Spa Management System** is a web application that digitises the whole front of house:

Area	What it gives you
Customer management	One searchable profile per customer — contact details, medical notes, loyalty, and full visit history.
Membership	Plans, renewals, freeze/transfer, RFID digital cards and QR passes.
Therapist workflow	Visits are checked in at reception, assigned to a therapist, started, treated and finished — with timestamps at every step.
Service tracking	Every treatment performed is recorded against the visit with quantities.
Service order handoff	Finishing a treatment prints a clean 80 mm draft slip (visit, customer, therapist, services) that the customer hands to the cashier.
Inventory control	Products and consumables with stock levels and automatic low-stock warnings.
Towel / laundry tracking	Issue, return and lost-towel management per visit.
Gym	Trainers, workout plans, fitness assessments, body measurements, classes and attendance.
Roles & permissions	Every user sees only what their job needs — reception, therapist, manager or admin.
Audit trail	Every create, edit and delete is logged with who did it and when.

3. Benefits

- **Faster customer service** — check-in takes seconds; history is one search away.
- **Reduced mistakes** — no more lost paper slips or re-typed customer details.
- **Better stock control** — know exactly what is used, what is low, and what to reorder.
- **Better reporting** — membership, attendance, service-order, therapist, trainer and inventory reports at the click of a button.
- **Accountability** — therapists, towels and services are all traceable.
- **Clean handoff to POS** — the draft service order removes manual re-entry for the cashier without duplicating financial systems.

4. How it fits with your sales (POS)

The Spa system is deliberately **operational, not financial**. It does **not** price treatments, charge customers, calculate tax or print invoices. When a treatment finishes it prints a **draft service order**:

```
DAGI SPA  --  SERVICE ORDER (DRAFT)
Visit No : SPA-000145      Date: 02 Aug 2026 14:32
Customer : Ruth Desta
Therapist: Hana Bekele

-----
Swedish Massage 60min    x1
Moroccan Bath          x1
-----

Total items: 2
Please take this slip to the cashier.
```

The customer takes the slip to the cashier, who completes the payment in the existing POS application. This keeps one source of truth for money and one for operations.

5. Security and control

- Password-protected login; passwords are stored hashed.
- Five roles: super admin, admin, manager, receptionist, guest.
- Every screen and action is protected by a permission.
- Every change is written to an audit log that the platform owner can review.
- Data is isolated per company — each spa only ever sees its own data.

6. What the system supports today

- English and **Amharic** interfaces.
- **Ethiopian Birr (ETB)** pricing and currency setting.

- 80 mm / 58 mm **thermal printer** support for service orders.
- Multi-branch and multi-company hosting (platform owner manages companies).
